

# SUNKARA SANDEEP NAIDU

Java Full Stack AWS Developer | Spring Boot | React.js | Kafka | Docker | Kubernetes | AWS

Pune, India | sandeepsunkara0007@gmail.com | 6281488738  
github.com/sunkarasandeepnaidu

## PROFESSIONAL SUMMARY

---

- Java Full Stack AWS Developer with 2.8+ years of experience building scalable microservices, responsive React.js frontends, and cloud-native applications on AWS. Skilled in Java, Spring Boot, React.js, Kafka, Docker, Kubernetes, and Terraform with strong expertise in backend engineering, full stack API integration, and CI/CD automation across distributed enterprise environments.

## SKILLS

---

- **Backend:** Java 8/11/17, Spring Boot 3.x, Spring Security, Spring Data JPA, Hibernate, JDBC, JUnit 5, Mockito
- **Frontend:** React.js, Redux, Context API, React Hooks, HTML5, CSS3, Bootstrap, Responsive UI Design
- **Microservices:** REST APIs, API Gateway, Eureka Service Discovery, Config Server, JWT, OAuth2, Resilience Patterns
- **Messaging:** Apache Kafka, Kafka Topics, Producers, Consumers, Event-Driven Architecture, JMS
- **Cloud & DevOps:** AWS (EC2, S3, Lambda, DynamoDB, API Gateway, IAM, CloudWatch, S3 CRR), Docker, Kubernetes, Terraform IaC, Jenkins, GitLab CI/CD
- **Database:** PostgreSQL, MySQL, MongoDB, DynamoDB, SQL Query Optimization, Indexing
- **Tools:** Git, GitHub, GitLab, Postman, SonarQube, Splunk, Zipkin, Maven, Gradle
- **OS:** Linux / Unix
- **Methodologies:** Agile, Scrum, Code Reviews, Software Documentation, SDLC

## EXPERIENCE

---

- **Capgemini** Pune, India  
*Software Engineer* Nov 2023 – Present
- **ROSA Full Stack Microservices Platform — Java 17, Spring Boot, React.js, Kafka, PostgreSQL, Docker, Kubernetes**
  - Developed end-to-end full stack features using Spring Boot microservices on the backend and React.js with Redux on the frontend; built responsive, component-driven UIs integrated with RESTful APIs for seamless user workflows.
  - Developed Spring Boot microservices for distributed business functionalities using REST APIs with `@PathVariable` and `@RequestParam` for dynamic and flexible endpoint design.
  - Implemented global exception handling using `@ControllerAdvice` and `@ExceptionHandler` to return structured error responses across all microservices.
  - Applied caching using `@Cacheable` and `@CacheEvict` annotations to reduce repeated database hits and improve API response times.
  - Designed and implemented Kafka topics, producers, and consumers to enable asynchronous event-driven communication between microservices using `KafkaTemplate` and `@KafkaListener`.
  - Integrated Eureka service discovery and API Gateway for resilient microservices communication; implemented JWT and OAuth2 with Spring Security for role-based access control across all backend and frontend layers.
  - Wrote and maintained unit and integration tests using JUnit 5 and Mockito; participated in code reviews, software documentation, and Agile/Scrum sprint cycles.
  - Containerized full stack application using Docker and orchestrated deployments on Kubernetes; contributed to CI/CD pipeline improvements using Jenkins and GitLab CI/CD; monitored via Splunk and Zipkin.
- **WRU Water Mitigation Platform — Java, Spring Boot, React.js, Spring Security JWT, AWS, Terraform**
  - Built full stack enterprise application with a Java/Spring Boot backend and React.js frontend; refactored a monolithic processing pipeline into a Chain of Responsibility architecture consuming 10+ external REST APIs, where each handler filters, validates, and enriches data before passing it downstream.
  - Built responsive React.js dashboard components for data visualization and operational workflows, consuming RESTful and SOAP APIs with structured error handling and loading state management.

- Migrated authentication from Basic Auth to JWT-based security using Spring Security, enforcing role-based access control across all backend APIs and React.js frontend route guards.
  - Deployed cloud-native applications on AWS (Lambda, S3, DynamoDB, API Gateway) for scalable, high-performing deployments; provisioned infrastructure using Terraform IaC for repeatable multi-environment setups.
  - Documented software specifications and cloud migration strategy; collaborated with architects and DevOps teams on deployment planning across hybrid cloud environments.
- **Cloud Infrastructure & DevOps Automation — AWS EC2, S3, Lambda, DynamoDB, IAM, Terraform, Multi-Region**
    - Designed and implemented multi-region AWS deployment architecture across US-East and US-West regions to ensure high availability, fault tolerance, and disaster recovery.
    - Configured S3 Cross-Region Replication (CRR) to automatically replicate objects across regions, ensuring data durability and minimizing RTO in case of regional failure.
    - Defined and enforced fine-grained IAM policies with least-privilege access, configuring explicit `GetObject` and `PutObject` permissions on S3 buckets for secure and controlled data access.
    - Integrated AWS services end-to-end: S3 event triggers invoking Lambda functions, with DynamoDB used for metadata tracking of processed records; stored outputs as structured CSV files with automated lifecycle management.
    - Implemented end-to-end CI/CD pipeline — build, test, Docker image push, and Kubernetes deploy via Helm on every merge to main, significantly reducing manual deployment effort.

## PROJECTS

---

- **Bike Rental Application — React.js, Redux, Spring Boot, PostgreSQL, Spring Security JWT, Docker**
  - Built a full stack bike rental platform with a React.js + Redux frontend and Spring Boot REST API backend connected to PostgreSQL for persistent data storage.
  - Developed modules for bike listing, availability tracking, rental booking, and return management with real-time status updates and responsive UI components.
  - Implemented JWT-based authentication and role-based access control to differentiate Admin and Customer workflows across both frontend and backend layers.
  - Handled global exception scenarios using `@ControllerAdvice` with custom error response models; containerized using Docker and deployed via GitLab CI/CD with automated build and test stages.

## ACHIEVEMENTS

---

- Delivered full stack enterprise features end-to-end using Spring Boot microservices and React.js frontends integrated with RESTful APIs in distributed cloud environments.
- Implemented Chain of Responsibility pattern consuming 10+ APIs for scalable single-pass data processing and enrichment.
- Architected multi-region AWS deployment with S3 Cross-Region Replication (CRR) for high availability and disaster recovery.
- Automated infrastructure provisioning using Terraform IaC; containerized applications with Docker and orchestrated on Kubernetes, significantly reducing manual deployment effort.
- Migrated authentication from Basic Auth to JWT-based Spring Security with role-based access control enforced across all application layers.
- Delivered consistent high-quality output through JUnit/Mockito testing, code reviews, and Agile collaboration with architects, QA, and DevOps teams across full SDLC.

## EDUCATION

---

- **PVP Siddhartha Institute of Technology**, Vijayawada  
Bachelor of Technology in Computer Science

2023
